

Contouring and required pre-planning tasks, such as image and prior dose registration, often present the greatest challenge for clinicians. The MIM Maestro® Department Solution delivers a comprehensive and automated clinical workflow for pre-planning.

MIM Maestro delivers flexible automation to the pre-planning process, designed to handle the varying treatments clinics provide. Incoming cases are identified and processed by MIM Assistant®, which performs automated contouring and registration, alleviating the workflow and technical barriers that hinder effective volume creation.

Handing off work between clinicians is seamless with MIM Maestro, allowing your team to focus on qualitative planning decisions.

Decrease Variability

To deliver safe and effective treatments, uncertainties must be systematically addressed and resolved. Standardize the segmentation process, incorporate more data, and reduce uncertainties with MIM Maestro's dynamic automation and industry-leading contouring.

Upgrade Contour Quality

Contouring using MIM Maestro incorporates all of your available clinical data with integrated QA, so that you can be confident contours are accurate.

Reduce SIM to Treatment Planning Time

Shorten the time from a patient's initial scan to treatment by standardizing and automating steps in the contouring process.
