

RADIATION ONCOLOGY

Innovations for Better Plans

Simplify Complex Treatments

MIM Software® provides vendor-neutral solutions to simplify increasingly complex clinical scenarios and standardize your Radiation Oncology workflow.

WHERE MIM® FITS INTO YOUR WORKFLOW

Plan Preparation

MIM Maestro®

Efficient and Accurate Plan Preparation

Contour ProtégéAI+™

Zero-Click AI Auto-Contouring
of Lymph Node Levels and OARs

Treatment Planning

MIM Symphony LDR™

MR-Guided Brachytherapy Treatment Planning

Remote Access

MIMcloud®

Secure Internet-Based Image Storage, Sharing,
and Viewing

MIM Zero Footprint™

Remote Access to MIM Software Solutions
from an Internet Browser

MIM Software

Better Plans Start with MIM Maestro

As treatment complexity increases, your patients' outcomes depend even more on accurate target volumes, confident assessment of prior treatments, and fast simulation-to-treatment times.

MIM Maestro helps you achieve precision and confidence for every patient you treat, regardless of complexity.

What Clinics Achieve with MIM Maestro

Better Target Volumes

Physicians draw more accurate target volumes in less time with accurate registrations, user-friendly displays, and efficient contouring tools.

Faster Simulation- to-Treatment Times

Treatment planning teams automate and standardize repetitive manual work to focus on problems that require their input. The result: patients get treated more quickly.

More Confident Treatment Evaluation

Clinicians evaluate all prior treatment information in one place. Automation with MIM Workflows™ makes it easy to sum plans and account for anatomical and radiobiological changes.

2,000+

Customers Worldwide

CONTOUR PROTÉGÉAI+

Zero-Click AI Auto-Contouring with Contour ProtégéAI+

Lymph node level and OAR auto-contours ready for review
in the TPS or MIM Maestro. No clicks needed to launch.

Ready to Use

Trained and ready to go—no need to collect a myriad of user-contoured datasets to begin. Quick to deploy and scale, no matter how large your patient volume.

Fast and Accurate

Auto-contouring begins immediately when MIM receives the simulation image. This significantly reduces contour editing time and expedites the target volume segmentation process.

Vendor-Neutral and Validated

Seamlessly integrates with Eclipse™, RayStation®, Monaco®, and Pinnacle. Validated and used daily at leading institutions around the globe.

WHAT MIM USERS ARE SAYING

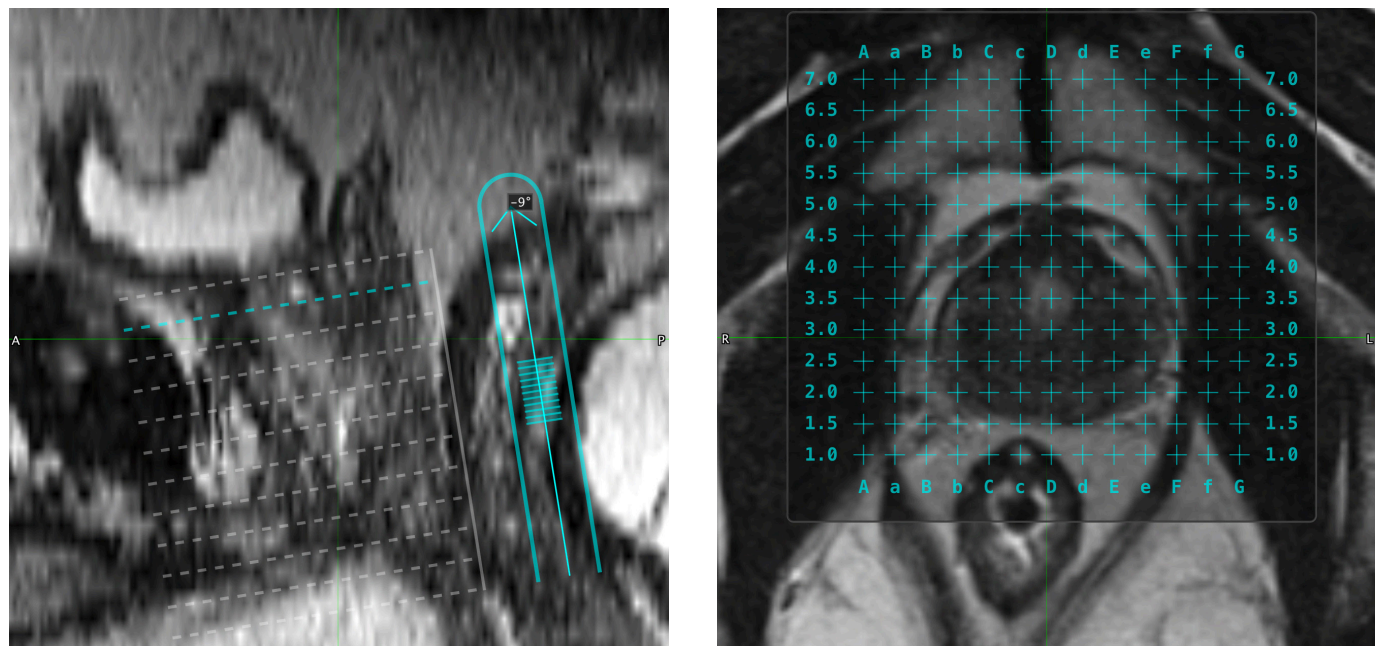

“On average, our process without auto-segmentation was close to an hour. With Contour ProtégéAI+, this time has been reduced to 6 to 12 minutes on average.”

Dominique Waguespack, BS, CMD, RT(T)
OCHSNER HEALTH

MIM SYMPHONY LDR

MR-Guided Brachytherapy Planning with MIM Symphony LDR

MIM ReSlicer®
Provides seamless MR-to-ultrasound registration.

Predictive Fusion®
Guides you to eliminate misalignments and deformation errors during ultrasound acquisition.

Full Platform
Full treatment planning platform for MR- or US-based planning with the same tools as MIM Maestro.

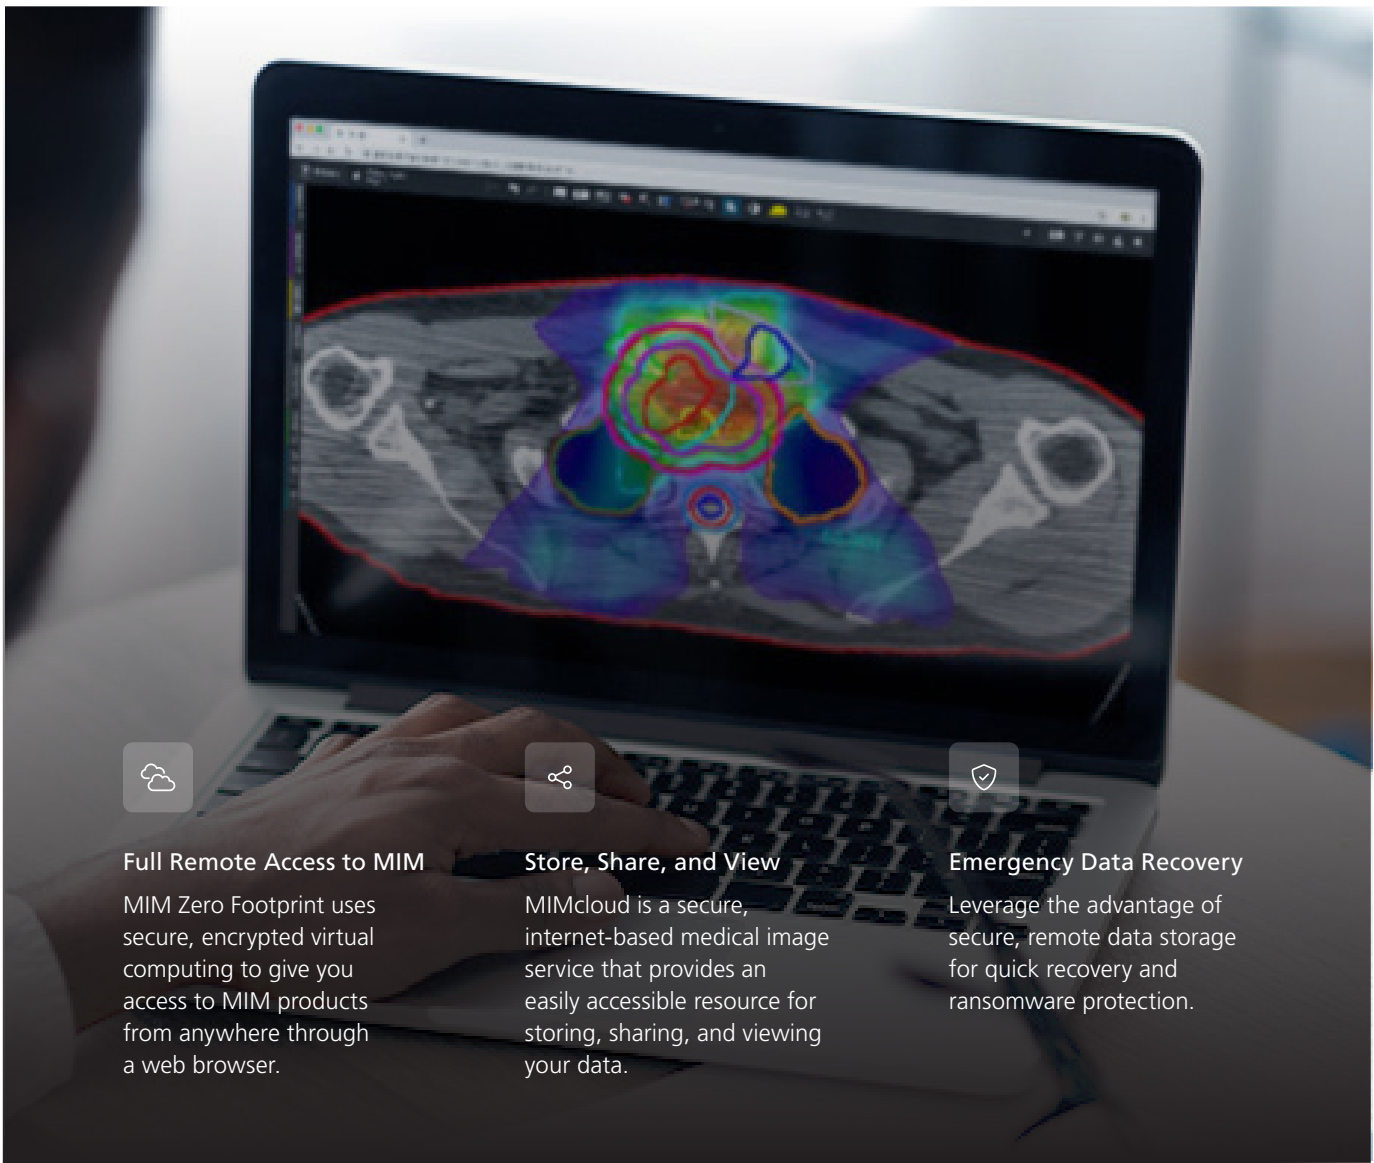

Prostate HDR Solutions

Experience improved lesion visualization and plan quality with MR. Using MR provides the ability to boost dose to the MR-visible lesion and enables more conformal dosimetry, resulting in improved cancer control with fewer complications.

REMOTE SOLUTIONS

Don't Compromise on Your Remote Contouring Connection

A fast, reliable, and effective contouring experience has always been a challenge for clinicians who need or want to work remotely. Hospital solutions, such as VPN and local hosting, introduce additional complications ranging from a lack of security to less-than-stellar performance. Now that working remotely is likely here to stay, what does your process look like?

Full Remote Access to MIM
MIM Zero Footprint uses secure, encrypted virtual computing to give you access to MIM products from anywhere through a web browser.

Store, Share, and View
MIMcloud is a secure, internet-based medical image service that provides an easily accessible resource for storing, sharing, and viewing your data.

Emergency Data Recovery
Leverage the advantage of secure, remote data storage for quick recovery and ransomware protection.
